Notes on extracting polarization observables

[11-14-13]

Define: $\left(\frac{d\sigma}{dX^{ij}d\phi^j}\right)^h \equiv f^h(X^{ij},\phi^j) = A^{ij} + B^{ij}\cos\phi^j + C^{ij}\cos 2\phi^j + hPD^{ij}\sin\phi^j$

where

- ij = index over Varset,Variable (3x5 matrix)
