11-14-13

Define:  $\left(\frac{d\sigma}{dX^{ij}d\phi^j}\right)^h \equiv f^h(X^{ij}, \phi^j) = A^{ij} + B^{ij} \cos \phi^j + C^{ij} \cos 2\phi^j + hPD^{ij} \sin \phi^j$

where

- ij = index over Varset, Variable (3x5 matrix)
